Consider it a foundation for the Lightweight Rescue Workshop, a fundamental rope rescue clinic, or just great time on rope learning new things and new ways to do things you already do. This class will build basic skills to make anyone who wants to work hard a solid, safe, and smart member of a technical rescue or SAR team. Class size is limited to maintain a highly individualized lesson plan and lots of on-rope time for all participants. Personal rope skills and personal mobility are the key to safe, efficient, and expedient rope rescue.

Skills covered may include:

Terrain Size up and classification | Anchor selection and construction | Gear placement
Descending fixed lines | Ascending fixed lines | Basics of No. 2 climbing | Haul systems in the back country | Patient Packaging | Movement through complex terrain | Small party leadership
